$$\frac{5.5}{10}$$

A hand-drawn map of Northern India illustrating the Indus River system. The map shows the Indus River flowing from the northwest towards the southwest, where it branches into the Sindh and Sutlej rivers. The Sutlej River flows southwards into the Punjab region. The Yamuna and Ganga rivers are shown flowing from the north towards the south. Mansarovar and Rakas Lake are marked in the northern part of the map. A red line indicates the boundary of Punjab, which is labeled as 'Punjab - The land between 5 rivers.' The map is drawn on a white background with black outlines for the rivers and regions.

Qualitative map representing the fertile Indo-Gangetic plains from where British collected max. revenue by imposing a higher tax slab.

Excellent use of map illustration showing the Indo-Gangetic plains targeted by the British. This visual aid enhances understanding of why these fertile regions were selected for higher taxation.

Objectives - To save administrative cost of revenue collection.

1) Community driven approach - The revenue collection contracts were signed by village headmen and Lambardars.

2) Accomodate diverse agricultural practices across various regions in India.

3) Varying rate of taxes were imposed which depended upon agricultural and market conditions.

4) Promote cash crops to support industrial revolution in Britain.

5) Maintain land records by land surveys which aimed at measurement, creation of landmap (Khasra).

Impact on peasant livelihoods

1) Exorbitant tax assessments - Flawed land surveys led to high & heavy tax assessments which ~~per~~ burdened the peasants with indebtedness and sale of their land to zamindars or moneylenders, eventually leading to land alienation.

2) Commodification of land - Land became a marketable asset which could be sold and purchased like any other commodity. This market was facilitated by Lambardars and British officials.

Effective analysis of tax burden leading to indebtedness and land alienation. Consider explaining how specifically the flawed land surveys resulted in inaccurate assessments.

Average						

Well-structured objectives section. Note that Lambardars were primarily collection agents rather than assessors - they implemented British revenue demands rather than determining them.

Good point about promoting cash crops to support Britain's industrial revolution, showing understanding of how colonial economic policies served metropolitan interests.

Question--

Revenue generation by British authority.

1) This was the most exploitative land revenue system in British India with varying rate of taxes upto 75% in some cases, resulting in a high revenue collection.

2) As planned, the British authority collected more rate of tax from regions of high agricultural productivity.

3) By involving intermediaries - Lambardars, British saved a lot on the cost of revenue collection.

Thus, the exploitative revenue collection policies of British led to a widespread resentment among peasants which culminated in the sepoys mutiny of 1857 & most of these sepoys were

"peasants in uniform".

Good analysis of high tax rates and targeted taxation. For greater accuracy, consider describing it as 'one of the most exploitative' systems rather than 'the most exploitative'.

Excellent conclusion connecting revenue policies to the 1857 revolt. The characterization of sepoys as 'peasants in uniform' is an insightful historical connection.
